

3kVA 24V

Includes 2.2kWp solar array with 2.4kWh of battery storage and AC/DC switch gear with all required protection components

TBB RIIO SUN 3KVA-M
Inverter MPPT 24V

Transformer based inverter

4x JES 340W Mono Solar Panel

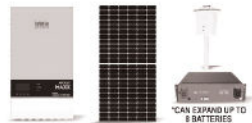

2x JES Deep Cycle Gel Battery
12V 100aH

TBB Kinergy -
WiFi Datalogging Stick

R60 720
Incl VAT

3kVA 48V

Includes 2.2kWp solar array with 5.2kWh of battery storage and AC/DC switch gear with all required protection components

TBB RIIO SUN 3KVA-S
Inverter MPPT 48V

Transformer based inverter

4x JES 340W Mono Solar Panel

1x TBB ES100 5.2kWh LiFePO4

TBB Kinergy -
WiFi Datalogging Stick

TBB LS Series Power/
Communication Cables

R98 230
Incl VAT

5kVA 48V

Includes 4.4kWp solar array with 5.2kWh of battery storage and AC/DC switch gear with all required protection components

TBB RIIO SUN 5KVA-S
Inverter MPPT 48V

Transformer based inverter

8x JES 550W Mono Solar Panel

1x TBB ES100 5.2kWh LiFePO4

TBB Kinergy -
WiFi Datalogging Stick

TBB LS Series Power/
Communication Cables

R126 863
Incl VAT

5kVA Hybrid

Includes 4.4kWp solar array with 10.4kWh of battery storage and AC/DC switch gear with all required protection components

TBB Apollo Matrix 5 kVA &
Apollo Matrix Meter

Transformer based inverter

8x JES 550W Mono Solar Panel

2x TBB ES100 5.2kWh LiFePO4

Kinergy Wifi Dongle &
E4 screen

TBB LS Series Power/
Communication Cables

for LS75/ES100

R188 892
Incl VAT

10kVA 48V

Includes 8.8kWp solar array with 10.4kWh of battery storage and AC/DC switch gear with all required protection components.

2x TBB Apollo Maxx 5.0S
48V/5kW/90A/150V

Transformer based inverter

16x JES 550W Mono Solar Panel

2x TBB ES100 5.2kWh LiFePO4

Kinergy Wifi Dongle

TBB LS Series Power/
Communication Cables

TBB Mounting Stackable Brackets
for LS75/ES100

R250 508
Incl VAT

*All prices excludes installation and consumables

Lithium-ion VS Lead Acid Batteries

1. Charge Cycles

A battery's lifespan is measured in charge cycles. Lead acid batteries typically offer about 300 to 500 cycles while lithium-ion batteries can cycle 3500 times or more.

2. Depth of Discharge

If you want to prolong the life of your battery, don't drain the power too much. Lead acid batteries should only be run to 50% depth of discharge to prevent damage. While lithium-ion batteries can handle deep discharges of 80% or more.

3. Efficiency

Depending on the model and condition, a lead acid battery only holds 80 to 85% of its power. Lithium-ion batteries are more efficient overall, allowing for faster charging rates and at least 95% power availability.

4. Charge Rate

Lead acid batteries are known to overheat if charged too quickly. Lithium batteries can handle higher amperage from the chargers, allowing for shorter recharge times – by comparison, a lead acid battery can take twice as long to charge back up again.

5. Energy Density

Lithium-ion batteries fit more storage capacity into less space. For example, it may take two lithium batteries to power a 5kW system, but you'll need 8 lead acid batteries to do the same job.

VERDICT

Lead acid batteries may seem like the more affordable option, but Lithium-ion batteries offer greater value and savings over the long term.

Inverters

An essential piece of kit, inverters convert solar DC power into AC power for use in the home.

There are 3 main types to choose from:

Off-Grid Inverters

Pros: These are still the most affordable and easy-to-install

Cons: They only have one function – converting DC to AC power, so you'll need to add the other elements, like an MPPT and Charge Controller, to complete your solution. They're also noisy and have a relatively short lifespan (about 10 years)

Grid-Tied Inverters

Pros: Scalable and affordable (no batteries required). Perfect for homes or businesses that operate mainly during the day

Cons: Slightly trickier to install as they need to be tied to an electricity grid. If the grid goes down, so does your connection. There's also no option for backup battery power

Hybrid Inverters

Pros: Flexible, scalable and high-tech. Has the ability to blend AC and DC power, is easy-to-install with a longer lifespan (15 years plus) – it's no wonder this version is everyone's must-have

Cons: It comes at a much higher price.

LET'S TALK INVERTER SIZE

The more power you use, the bigger your inverter will need to be

Step 1:

Average monthly electricity bill divided by Price per kW = Monthly usage in kW

Step 2:

Monthly usage in KW divided by Days of the Month (ie 30) = Daily usage in kW

Step 3:

Daily usage in KW divided by peak solar production hours (usually 5.5 hours per day) = Your kW needs / the size of your inverter
